Adding Targets - Acunetix

[\[https://www.acunetix.com/support/docs/adding-targets\]](https://www.acunetix.com/support/docs/adding-targets)

Adding Targets Targets are the websites and web applications that you would like to scan using Acunetix. Targets are added to Acunetix either from the Discovery page or the Targets page. This guide shows you how to manually add Targets and how you can import Targets from another application using a CSV file. How to add a Target Select Targets > Add Targets from the Acunetix menu. In the ...

[\[https://projectdiscovery.io/blog/how-to-run-nuclei-other-projectdiscovery-tools-in-docker\]](https://projectdiscovery.io/blog/how-to-run-nuclei-other-projectdiscovery-tools-in-docker)

Some of the most popular tools by ProjectDiscovery are Nuclei (template-based vulnerability scanner), HTTPx (multipurpose HTTP toolkit), and Subfinder (subdomain enumeration and discovery tool). While the installation process is typically very straightforward for ProjectDiscovery tools, one can often encounter some difficulty setting up a proper environment to run the tool, especially when ...

Gobuster Tool in Kali Linux: A Comprehensive Guide - TechArry

[\[https://techarry.com/gobuster-tool-in-kali-linux-a-comprehensive-guide\]](https://techarry.com/gobuster-tool-in-kali-linux-a-comprehensive-guide)

Introduction. In the realm of cybersecurity, efficient tools are paramount for identifying vulnerabilities and securing systems. One such powerful tool is Gobuster, commonly used in Kali Linux environments. Gobuster excels at brute-forcing URIs, discovering hidden directories and files, finding DNS subdomains, and even uncovering open cloud storage buckets.
